

I'm not robot!

and view their billing history. You can redirect your users to the billing portal by invoking the `redirectToBillingPortal` method on the billable model from a controller or route: `use Illuminate\Http\Request; Route::get('/billing-portal', function (Request $request) { return $request->user()->redirectToBillingPortal(); });` By default, when the user is finished managing their subscription, they will be able to return to the home route of your application via a link within the Stripe billing portal. You may provide a custom URL that the user should return to by passing the URL as an argument to the `redirectToBillingPortal` method: `use Illuminate\Http\Request; Route::get('/billing-portal', function (Request $request) { return $request->user()->redirectToBillingPortal(route('billing')); });` If you would like to generate the URL to the billing portal without generating an HTTP redirect response, you may invoke the `billingPortalUrl` method: `$url = $request->user()->billingPortalUrl(route('billing'));` **Payment Methods Storing Payment Methods** In order to create subscriptions or perform "one off" charges with Stripe, you will need to store a payment method and retrieve its identifier from Stripe. The approach used to accomplish this differs based on whether you plan to use the payment method for subscriptions or single charges, so we will examine both below. **Payment Methods For Subscriptions** When storing a customer's credit card information for future use by a subscription, the Stripe "Setup Intents" API must be used to securely gather the customer's payment method details. A "Setup Intent" indicates to Stripe the intention to charge a customer's payment method. Cashier's Billable trait includes the `createSetupIntent` method to easily create a new Setup Intent. You should invoke this method from the route or controller that will render the form which gathers your customer's payment method details: `return view('update-payment-method', ['intent' => $user->createSetupIntent()]);` After you have created the Setup Intent and passed it to the view, you should attach its secret to the element that will gather the payment method. For example, consider this "update payment method" form: Next, the Stripe.js library may be used to attach a Stripe Element to the form and securely gather the customer's payment details:
